These are the most common problems merchants encountered with the older version of the restaurant partner apps

Simplify login experience

Difficult to remember 8 digit res ID while logged into the app

Can't manage multiple outlets

Need easy access to switch between outlets without logging out

To much information on the screen and loud colors

Difficult to focus on information which is important or which is not

Can't edit food preparation time

Don't have the ability to set food preparation time

No way to connect to the rider

Merchants don't have the ability to connect with the rider when he is on the way

Can't give rider feedback

In case the rider misbehaves at the outlet the merchants don't have the ability to report

Design process

Research

To understand the issues, with desk and in-person market research was conducted

UX Design

While designing the UX, merchant feedback was taken into account

UI & Interaction

This app features bold colours, fonts, and easy-to-use interactions

Prototyping testing

A usability test was conducted to ensure that the solution was user-friendly

App functionalities

01

Manage multiple outlets and orders

Sign in to multiple outlets and accept new orders

02

Manage food menu

Manage stock of items, edit items & create new items

03

Metrics for tracking sales

Compare daily, weekly, and monthly sales

04

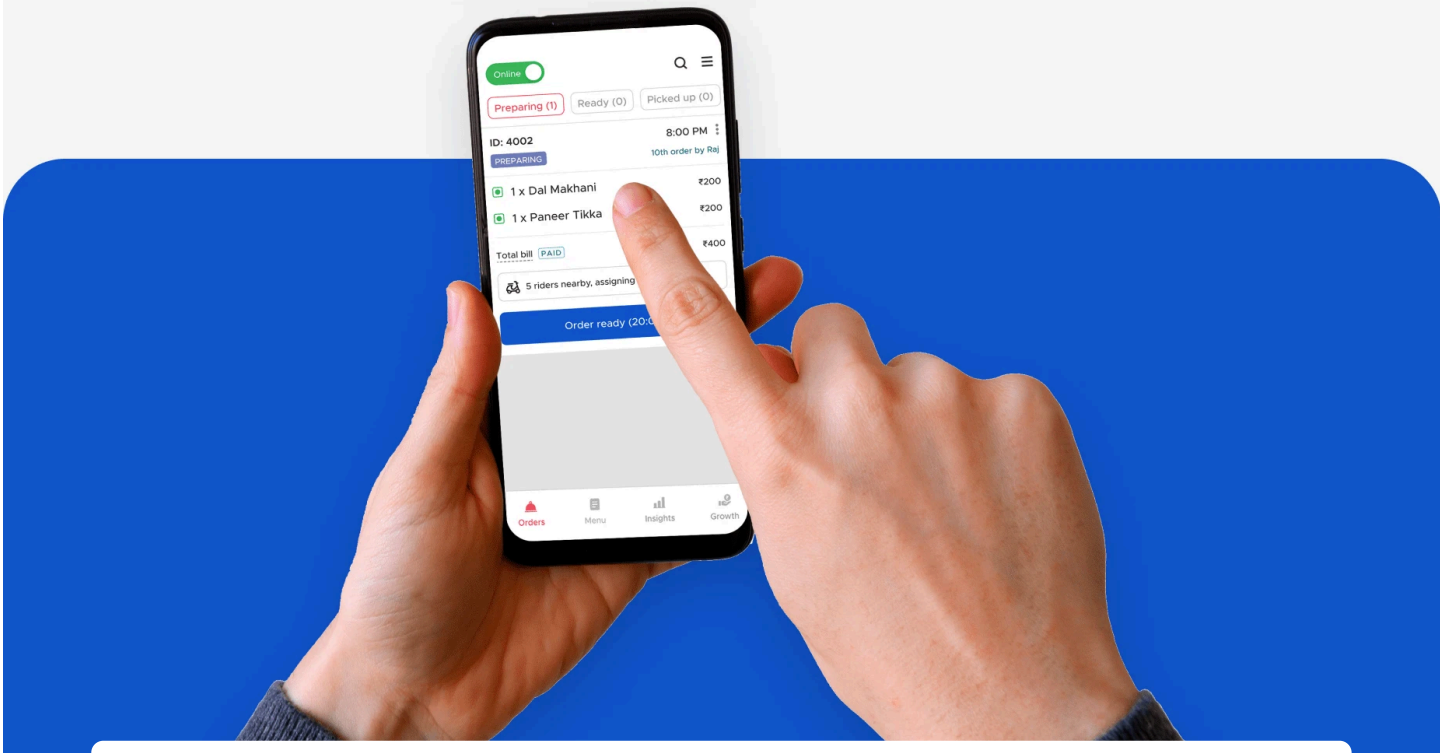

Create promotions and offers

Offer discounts to attract new and loyal customers

05 +more

Settings and more

Manage timings, notifications, staff, and more

Solving UX for "Order under preparation"

Problem

It was difficult for merchants to keep track of order time stamps when multiple orders are in preparation during peak times. After the order was received, they mentally calculated how long it had been since the order was received.

Solution

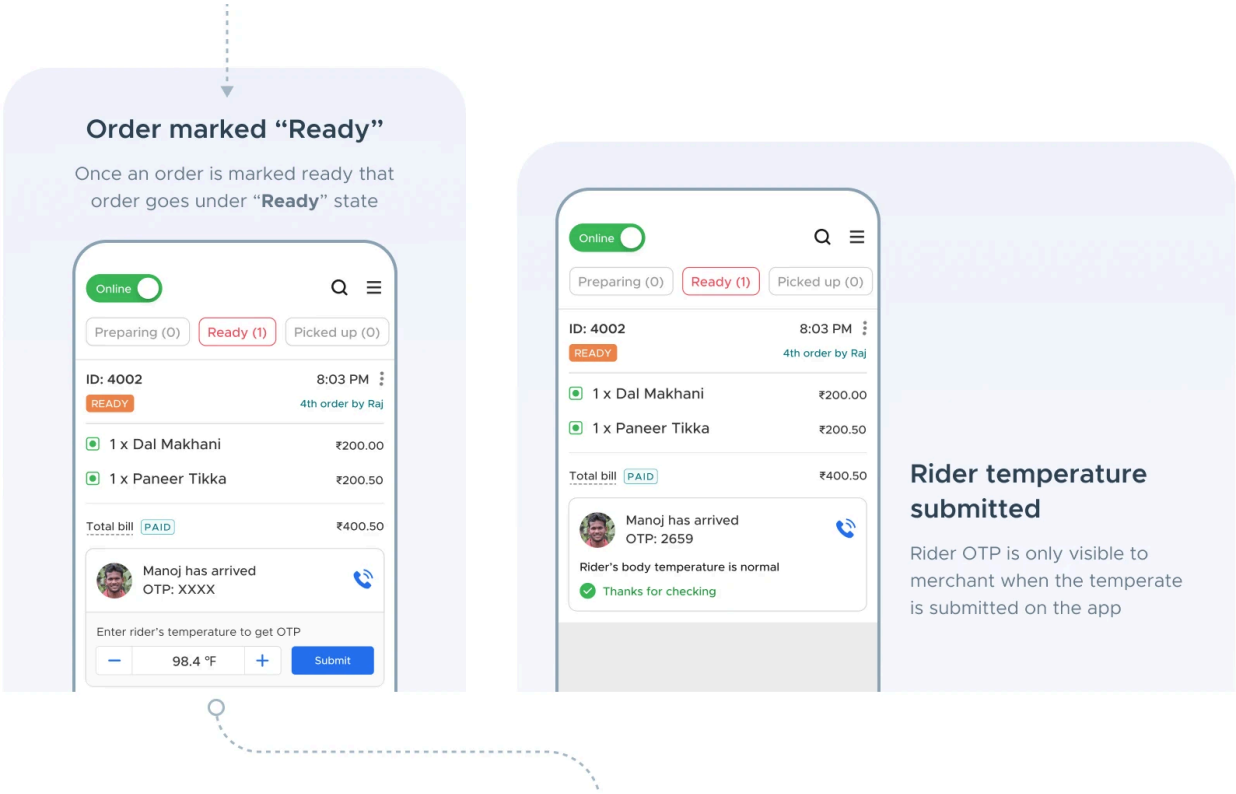

When the order was received, we animated the time and displayed how much time had passed since the order was received. By doing so, merchants could see the actual time stamp instantly at a glance.

B

Delay in food preparation

The merchant is asked if he needs extra time to prepare the food when an order is not prepared on time.

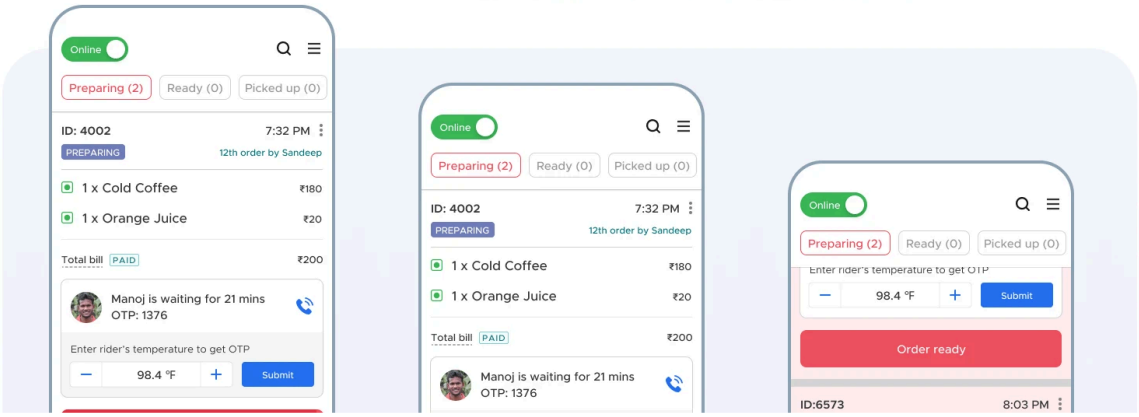

If an order is running late, a black colored pill will appear at the bottom.

How extra time is managed

Merchants are allowed to take extra time only once. Upon taking the order, he cannot request more time and must mark it ready within that timeframe.

The order is considered super late if he fails to mark the order readdy in the extra time taken in which case the card color turns red

B

Delayed orders

Problem

Merchants couldn't keep track of the orders that are on time and the ones that are running late.

Solution

In the case of an order that is not marked as "Order ready" in time, the card turns red and the button starts blinking, this was done to get the merchant's attention.
